CMMC Documentation Template Package

Editable CMMC policies, plans and procedures

What is Ascolta's CMMC Documentation Template Package?

Ascolta's CMMC Document Template Packages provide editable Microsoft Word and Excel templates that are written to satisfy Cybersecurity Maturity Model Certification (CMMC) Framework Level 1, 2 and 3 requirements.

Instead of starting from scratch, start with 90% of the writing already done. There will still be some writing, configuration and tailoring of the templates, but at a fraction of the cost, effort and time than if you were starting from scratch. And the end result is a better product.

Challenges

As you begin preparing the documentation for your CMMC assessment you quickly realize the sheer number of policies, plans and procedures required to adequately document and manage your compliance. Many companies start with an existing set of internal policies and procedures but quickly realize they are incomplete, insufficient and often contradictory. The process of writing cybersecurity documentation internally can take your existing team months and involves pulling your most senior and experienced cybersecurity experts away from their operational duties to assist in the process.

If you decide to outsource the task, in addition to the cost of hiring a cybersecurity consultant to write the documentation you still need to devote your time to provide guidance and assist in the final deliverable. The consultant will require involvement from your team for direction, answering questions and quality control, so the impact is not limited to just the consultant's hours.

The task of writing all the required documents can take months and hundreds of hours. Some estimates place it at 9-12 months of staff work – your staff have day jobs after all – and upwards of $60,000 in labor expenses. With the consultant route, after hiring a firm to conduct a gap assessment and then navigating through months of meetings, interviews and presentations, they provide documentation at a cost double of what you could have done it yourself and only marginally faster.
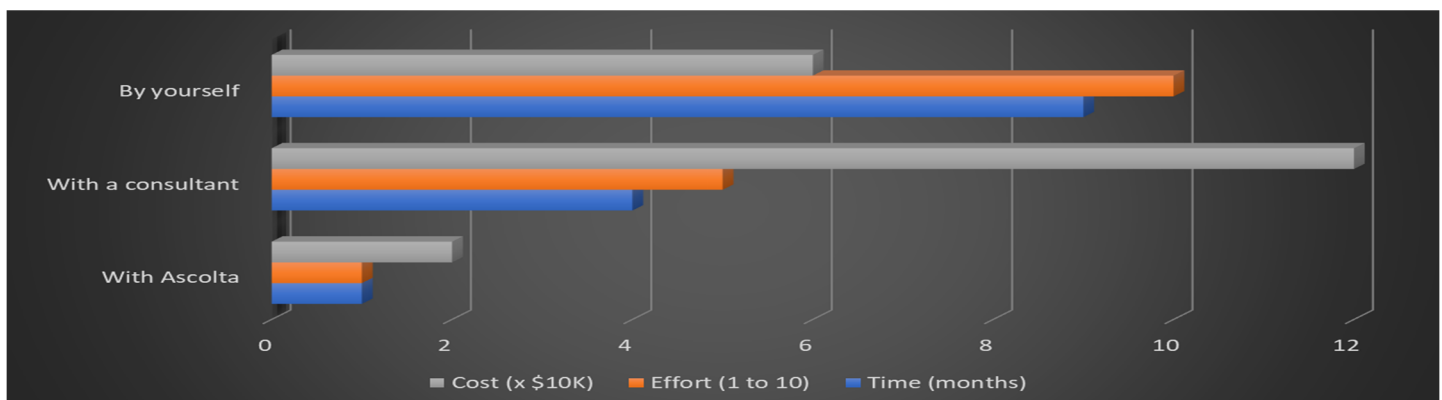

THE REQUIREMENTS

System Security Plan

Develop, document, and periodically update system security plans that describe system boundaries, system environments of operation, how security requirements are implemented, and the relationships with or connections to other systems.

Processes Documented

Level 2 requires that an organization establish and document practices and policies to guide the implementation of CMMC efforts.

Processes Managed

Level 3 requires that an organization establish, maintain, and resource a plan demonstrating the management of activities for practice implementation.

WHAT YOU GET

Ascolta offers a complete CMMC document template package with over seventy, fully editable Microsoft Word or Excel document, templates. The Level 3 package includes:

- System Security Plan template
- 17 CMMC Policy templates
- 17 CMMC Plan templates
- 17 CMMC Practice Implementation Procedure templates
- 10 Organizational Policy templates

Achieving a Cybersecurity Maturity Model Certification (CMMC) assessment requires thorough documentation in the form of policies, plans and implementation guides. Starting from scratch to create your own documents while ensuring they cover all the required CMMC Framework practices and National Institute of Standards and Technology (NIST) controls can be daunting and time consuming.

Our CMMC Documentation Ecosystem provides linked and supporting documents based from CMMC and NIST 800-171 requirements. The package provides templates for all CMMC required documentation of your system to achieve a CMMC Level 1, 2 or 3 assessment.

CMMC Documentation Ecosystem
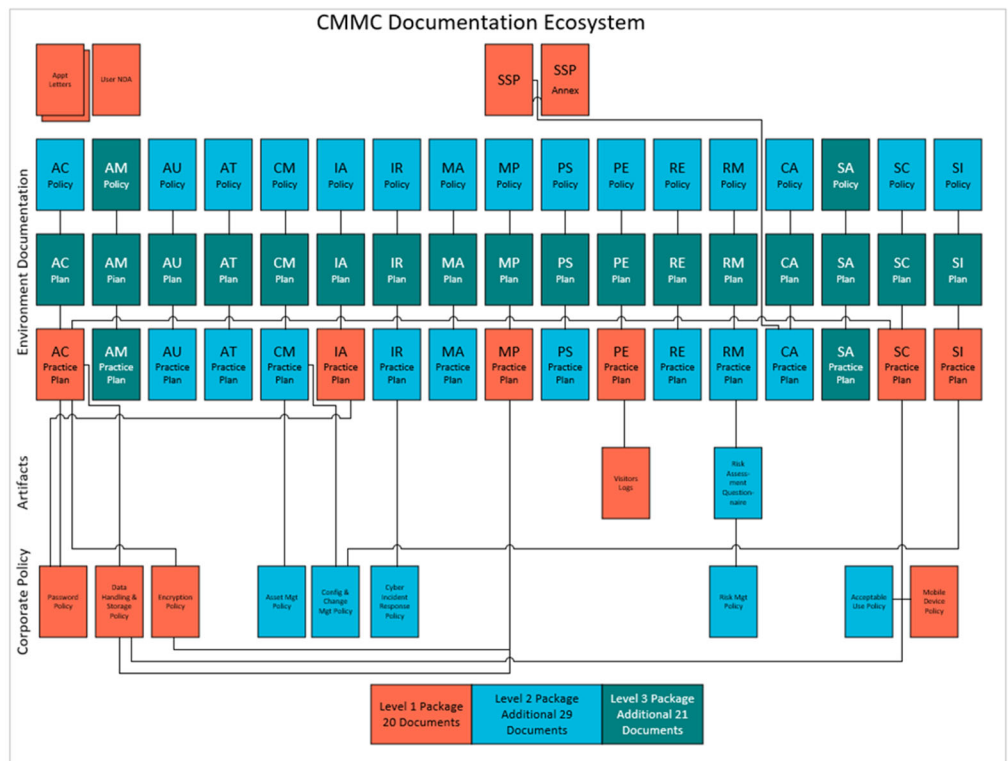

Save yourself and your company the time, money and effort of creating these documents from scratch. Purchase the Ascolta CMMC Document Template package that's right for your assessment needs today.

Ascolta is a CMMC Accreditation Board Registered Provider Organization.
